

## NOTES FOR USE OF THE SUBJECT INDEX

Citations give the year/month, not the volume/number.

Citations give the consecutive page number for the entire collection of Boosters (1-203) not the page number of each issue, because many issues had no page numbers.

The page number refers to the first page of the article, not to all pages. An exception is made for some of the extended lists of post offices, where individual page numbers are entered.

A "p." in the Notes column indicates the issue includes a picture.

Some entries have cross-references. "See" means all entries will be found under an alternate word or phrase. "See also" means another word or phrase may supply additional entries.

Post offices are listed under "Post offices: ...". If there is substantial information on cities/villages, unrelated to the post office, it's listed by city name followed by WI. There are cross-references between city and post office if there are entries for both. Contract post offices are listed under the community name, not the contractor name. All post offices are/were in Wisconsin, unless otherwise noted.

The index is sorted by computer, which means it may not always be in exactly the expected order, especially if the entry includes punctuation or numbers, e.g., Bulletin No. 10 sorts before Bulletin No. 2. However, there should not be enough difference to cause major confusion.

Names have been indexed when there is substantial information about the person within the text, or when the person appears on a picture. Not all names mentioned within an article are indexed, depending on their importance. To find all references to a name, regardless of context, it would be better to use the "Custom Search" feature on the web. (Go to the WFSC website; click on Badger Postal History; scroll down to the Custom Search box; enter a name, and search.)
